靶点信息

研究背景	The protein encoded by this gene is a receptor for opioid growth factor (OGF), also known as [Met(5)]-enk ephalin. OGF is a negative regulator of cell proliferation and tissue organization in a variety of processes. The encoded unbound receptor for OGF has been localized to the outer nuclear envelope, where it binds OGF and is translocated into the nucleus. The coding sequence of this gene contains a polymorphic regio n of 60 nt tandem imperfect repeat units. Several transcripts containing between zero and eight repeat u nits have been reported.
