| 研究背景 | This gene encodes a member of the cGMP-inhibited cyclic nucleotide phosphodiesterase (cGI-PDE) family. cGI-PDE enzymes hydrolyze both cAMP and cGMP, and play critical roles in many cellular processes by re gulating the amplitude and duration of intracellular cyclic nucleotide signals. The encoded protein mediat es platelet aggregation and also plays important roles in cardiovascular function by regulating vascular s mooth muscle contraction and relaxation. Inhibitors of the encoded protein may be effective in treating c ongestive heart failure. Alternatively spliced transcript variants encoding multiple isoforms have been ob served for this gene. |
