

# **DNMT3L Rabbit pAb**

货号: **B14959** 

## 产品信息

| 反应    | Human,Mouse,Rat                                                                                     |
|-------|-----------------------------------------------------------------------------------------------------|
| 宿主    | Rabbit                                                                                              |
| 克隆性   | Polyclonal                                                                                          |
| 预测反应  | WB: HeLa                                                                                            |
| 应用    | WB IHC                                                                                              |
| 推荐浓度  | WB: 1:500 - 1:2000<br>IHC: 1:50 - 1:200                                                             |
| 理论分子量 | 43kDa                                                                                               |
| 实测分子量 | 43kDa                                                                                               |
| 形式    | Liquid                                                                                              |
| 保存条件  | Store at -20°C. Avoid freeze / thaw cycles. Buffer: PBS with 0.02% sodium azide,50% glycerol,pH7.3. |
| 偶联物   | Unconjugated                                                                                        |
| 阳性对照  |                                                                                                     |
| 细胞定位  | Nucleus                                                                                             |
| 纯化    | Affinity purification                                                                               |

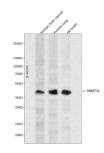

## 抗原信息

| 抗原信息 | A synthetic peptide corresponding to a sequence within amino acids 100-200 of human DNMT3L (NP_787 063.1). |

靶点信息

| 研究背景  | CpG methylation is an epigenetic modification that is important for embryonic development, imprinting, a nd X-chromosome inactivation. Studies in mice have demonstrated that DNA methylation is required for mammalian development. This gene encodes a nuclear protein with similarity to DNA methyltransferases, but is not thought to function as a DNA methyltransferase as it does not contain the amino acid residues necessary for methyltransferase activity. However, it does stimulate de novo methylation by DNA cytosin e methyltransferase 3 alpha and is thought to be required for the establishment of maternal genomic imprints. This protein also mediates transcriptional repression through interaction with histone deacetylase 1. Alternatively spliced transcript variants encoding different isoforms have been found for this gene. |

| 别名    | DNMT3L                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

#### 产品验证

Western blot analysis of DNMT3L expressed in human liver cancer, mouse lung, rat brain using DNMT3L Rabbit pAb at 1:1000. Secondary antibody: HRP Goat Anti-Rabbit IgG (H+L) at 1:5000. Lysates/proteins: 30ug per lane. Blocking buffer: 5% non-fat dry milk in TBST. Detection: ECL Enhanced Kit. Exposure tim e: 120s.
