靶点信息

研究背景	Integrins are heterodimeric integral membrane proteins composed of an alpha chain and a beta chain. Th is gene encodes an I-domain-containing alpha integrin that undergoes post-translational cleavage in the e xtracellular domain, yielding disulfide-linked heavy and light chains. In combination with the beta 7 integr in, this protein forms the E-cadherin binding integrin known as the human mucosal lymphocyte-1 antigen. This protein is preferentially expressed in human intestinal intraepithelial lymphocytes (IEL), and in additi on to a role in adhesion, it may serve as an accessory molecule for IEL activation.
