靶点信息

研究背景	This gene encodes a member of the dishevelled (dsh) protein family. The vertebrate dsh proteins have ap proximately 40% amino acid sequence similarity with Drosophila dsh. This gene encodes a 90-kD protein that undergoes posttranslational phosphorylation to form a 95-kD cytoplasmic protein, which may play a role in the signal transduction pathway mediated by multiple Wnt proteins. The mechanisms of dishevelle d function in Wnt signaling are likely to be conserved among metazoans.
