## 靶点信息

研究背景	The protein encoded by this gene contains a RING finger motif, which is most closely related to those of p olycomb group (PcG) proteins RNF110/MEL-18 and BMI1. PcG proteins are known to form protein complex es and function as transcription repressors. This protein has been shown to interact with some PcG protei ns and act as a transcription repressor. The activity of this protein is found to be regulated by cell cycle d ependent phosphorylation. Alternatively spliced transcript variants encoding different isoforms have bee n identified.
