靶点信息

研究背景	The protein encoded by this gene is a small GTPase that acts as a homodimer. The encoded protein is act ivated by the guanine nucleotide exchange factor PREB and is involved in protein transport from the endo plasmic reticulum to the Golgi. This protein is part of the COPII coat complex. Defects in this gene are a c ause of chylomicron retention disease (CMRD), also known as Anderson disease (ANDD). Two transcript v ariants encoding the same protein have been found for this gene.
