靶点信息

研究背景	UDP-glucuronosyltransferase (UGT that catalyzes phase II biotransformation reactions in which lipophilic s ubstrates are conjugated with glucuronic acid to increase the metabolite's water solubility, thereby facilit ating excretion into either the urine or bile. Essential for the elimination and detoxification of drugs, xeno biotics and endogenous compounds. Catalyzes the glucuronidation of the endogenous estrogen hormone s such as estradiol and estriol.
