靶点信息

研究背景	This gene is a member of the peroxidase gene family and is expressed in eosinophils. The encoded prepr otein is proteolytically processed into covalently attached heavy and light chains to form the mature e nzyme, which functions as an oxidant. The enzyme is released at sites of parasitic infection or allergen sti mulation to mediate lysis of protozoa or parasitic worms. The gene is found in a gene cluster with other p eroxidase genes on chromosome 17. Mutations in this gene result in eosinophil peroxidase deficiency.
