靶点信息

研究背景 This protein encoded by this gene localizes to the nucleus and is expressed in numerous tissues included brain, testis, liver, and kidney. This refseq contains genomic sequence in its 3' UTR which is not suppose by experimental evidence. Computer predictions indicate that this region of the 3' UTR contains hairping rming self-complementary sequence which is possibly excised after transcription. This gene has a pse gene on chromosome X.
