靶点信息

研究背景	This gene an enzyme which catalyzes the transfer of the gamma-phosphate from ATP to adenosine, there by serving as a regulator of concentrations of both extracellular adenosine and intracellular adenine nucl eotides. Adenosine has widespread effects on the cardiovascular, nervous, respiratory, and immune syste ms and inhibitors of the enzyme could play an important pharmacological role in increasing intravascular adenosine concentrations and acting as anti-inflammatory agents. Multiple transcript variants encoding d ifferent isoforms have been found for this gene.
