靶点信息

研究背景	This gene encodes a protein that is a member of the dickkopf family. The secreted protein contains two c ysteine rich regions and is involved in embryonic development through its interactions with the Wnt sign aling pathway. It can act as either an agonist or antagonist of Wnt/beta-catenin signaling, depending on t he cellular context and the presence of the co-factor kremen 2. Activity of this protein is also modulated by binding to the Wnt co-receptor LDL-receptor related protein 6 (LRP6).
