靶点信息

研究背景	The protein encoded by this gene is a member of the transmembrane 4 superfamily, also known as the te traspanin family. Most of these members are cell-surface proteins that are characterized by the presence of four hydrophobic domains. The proteins mediate signal transduction events that play a role in the regul ation of cell development, activation, growth and motility. This encoded protein is a cell surface glycoprot ein that is known to complex with integrins. This gene is expressed in different carcinomas. The use of alt ernate polyadenylation sites has been found for this gene.
