靶点信息

研究背景	This gene encodes a member of the LSm family of RNA-binding proteins. LSm proteins form stable hetero mers that bind specifically to the 3'-terminal oligo(U) tract of U6 snRNA and may play a role in pre-mRNA splicing by mediating U4/U6 snRNP formation. Increased expression of this gene may play a role in cellula r transformation and the progression of several malignancies including lung cancer, mesothelioma and br east cancer. Alternatively spliced transcript variants have been observed for this gene, and a pseudogene of this gene is located on the short arm of chromosome 9.
