靶点信息

研究背景	This gene is a member of the frizzled gene family. Members of this family encode seven-transmembrane domain proteins that are receptors for the wingless type MMTV integration site family of signaling protein s. Most frizzled receptors are coupled to the beta-catenin canonical signaling pathway. The function of thi s protein is unknown, although it may play a role in mammalian hair follicle development. Alternative spli cing results in multiple transcript variants. This gene is a susceptibility locus for schizophrenia.
