靶点信息

研究背景	Catalyzes the first and rate-limiting reaction of the four reactions that constitute the long-chain fatty acid s elongation cycle. This endoplasmic reticulum-bound enzymatic process allows the addition of 2 carbons to the chain of long- and very long-chain fatty acids (VLCFAs per cycle. Condensing enzyme that catalyze s the synthesis of polyunsaturated very long chain fatty acid (C20- and C22-PUFA, acting specifically towa rd polyunsaturated acyl-CoA with the higher activity toward C20:4(n-6 acyl-CoA. May participate in the pr oduction of polyunsaturated VLCFAs of different chain lengths that are involved in multiple biological proc esses as precursors of membrane lipids and lipid mediators.
