靶点信息

Receptor tyrosine kinases play a key role in the communication of cells with their microenvironment. The se kinases are involved in the regulation of cell growth, differentiation and metabolism. The protein encod ed by this gene belongs to a subfamily of tyrosine kinase receptors with homology to Dictyostelium discoi deum protein discoidin I in their extracellular domain, and that are activated by various types of collagen. Expression of this protein is restricted to epithelial cells, particularly in the kidney, lung, gastrointestinal t ract, and brain. In addition, it has been shown to be significantly overexpressed in several human tumors. Alternatively spliced transcript variants encoding different isoforms have been described for this gene.
