

# Phospho-Ezrin-Thr567/Radixin-Thr564/Moesin-Thr558 Rabbit pAb

货号: B23112

#### 产品信息

反应	Human
宿主	Rabbit
克隆性	Polyclonal
预测反应	
应用	WB
推荐浓度	<b>WB:</b> 1:500 - 1:1000
理论分子量	69kDa/68kDa/67kDa
实测分子量	75KDa/80KDa
形式	Liquid
保存条件	Store at -20°C. Avoid freeze / thaw cycles. Buffer: PBS with 0.05% proclin300,50% glycerol,pH7.3.
偶联物	Unconjugated
阳性对照	HeLa,A-431
细胞定位	actin cytoskeleton,apical plasma membrane,basolateral plasma membrane,cell projection,ciliary basal bo dy,cortical cytoskeleton,cytoplasm,cytoplasmic side of apical plasma membrane,cytosol,endosome,extrac ellular exosome,extracellular space,fibrillar center,filopodium,focal adhesion,immunological synapse,micr ovillus membrane,perinuclear region of cytoplasm,plasma membrane,plasma membrane raft,ruffle mem brane
纯化	Affinity purification

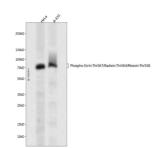

#### 抗原信息

抗原信息	A synthetic phosphorylated peptide around T567 of human Ezrin/Radixin/MoesinEZR (NP_003370.2).
序列	YKTLR

靶点信息

研究背景  The cytoplasmic peripheral membrane protein encoded by this gene functions as a protein-tyrosine kinas e substrate in microvilli. As a member of the ERM protein family, this protein serves as an intermediate b etween the plasma membrane and the actin cytoskeleton. This protein plays a key role in cell surface stru cture adhesion, migration and organization, and it has been implicated in various human cancers. A pseu dogene located on chromosome 3 has been identified for this gene. Alternatively spliced variants have als o been described for this gene.Radixin is a cytoskeletal protein that may be important in linking actin to t he plasma membrane. It is highly similar in sequence to both ezrin and moesin. The radixin gene has bee n localized by fluorescence in situ hybridization to 11q23. A truncated version representing a pseudogene (RDXP2) was assigned to Xp21.3. Another pseudogene that seemed to lack introns (RDXP1) was mapped to 11p by Southern and PCR analyses. Multiple alternatively spliced transcript variants encoding different isoforms have been found for this gene. Moesin (for membrane-organizing extension spike protein) is a member of the ERM family which includes ezrin and radixin. ERM proteins appear to function as cross-linker s between plasma membranes and actin-based cytoskeletons. Moesin is localized to filopodia and other membranous protrusions that are important for cell-cell recognition and signaling and for cell movement.  ###################################

### 产品验证

Western blot analysis of Phospho-Ezrin-Thr567/Radixin-Thr564/Moesin-Thr558 expressed in HeLa,A-431 using Phospho-Ezrin-Thr567/Radixin-Thr564/Moesin-Thr558 Rabbit pAb at 1:1000. Secondary antibody: HRP Goat Anti-Rabbit IgG (H+L) at 1:5000. Lysates/proteins: 30ug per lan e. Blocking buffer: 5% non-fat dry milk in TBST. Detection: ECL Enhanced Kit. Exposure time: 1 20s.
