靶点信息

研究背景	This gene encodes a member of the cytochrome P450 superfamily of enzymes. The cytochrome P450 pro teins are monooxygenases which catalyze many reactions involved in drug metabolism and synthesis of c holesterol, steroids and other lipids. This endoplasmic reticulum protein is involved in the conversion of c holesterol to bile acids. Its substrates include the oxysterols 25-hydroxycholesterol, 27-hydroxycholesterol and 24-hydroxycholesterol. Alternate splicing results in multiple transcript variants.
