

BAPTA-AM

货号: **B26665**

产品信息

生物活性	BAPTA-AM is a well-known membrane permeable Ca²⁺ chelator . BAPTA-AM inhibits hERG channels, hKv1.3 and hKv1.5 channels in HEK 293 cells with IC₅₀s of 1.3 μM, 1.45 μM and 1.23 μM, respectively.

体外研究	<p>BAPTA-AM inhibits neuronal Ca²⁺-activated K⁺ channel currents, and up-regulates the decreased cardiac sodium current (I_{Na}) density by chelating intracellular Ca²⁺.</p> <p>BAPTA-AM (BAPTA/AM), an intracellular calcium chelator, induces delayed necrosis by lipoxygenase-mediated free radicals in mouse cortical cultures. BAPTA-AM prevents free radical-mediated toxicity promote a poptosis in non-neuronal cells and produce a beneficial effect in neuronal cells by protecting neurons from ischemic damage. In addition, it has been suggested that BAPTA-AM induces a late, but not early, increase of intracellular calcium in I-IL-60 neoplastic cells. Mixed cortical cell cultures (DIV 13-16) exposed to 10 μM BAPTA-AM for 24- or 48-hr show moderate (45-70%) neuronal injury as evaluated by increased LDH release into the bathing medium after 24-48-hr. Exposure of cortical cultures to 3-10 μM BAPTA-AM for 48-hr evoke dose-dependent neuronal damage.</p> <p>The accuracy of these methods have not been independently confirmed. They are for reference only.</p>
