

Pseudouridine 5'-triphosphate trisodium

货号: **B26745**

产品信息

生物活性	Pseudouridine-5'-triphosphate (Pseudo-UTP) is one of the most commonly used modified nucleoside for the polymerase-mediated synthesis of RNA molecules. Compared with uridine-containing unmodified mRNAs, the application of pseudouridine-containing modified mRNAs exhibits better nuclease stability, immunogenicity, and translational properties..
