靶点信息

研究背景	Vascular endothelial growth factor (VEGF) is a major growth factor for endothelial cells. This gene encode s one of the two receptors of the VEGF. This receptor, known as kinase insert domain receptor, is a type III receptor tyrosine kinase. It functions as the main mediator of VEGF-induced endothelial proliferation, s urvival, migration, tubular morphogenesis and sprouting. The signalling and trafficking of this receptor ar e regulated by multiple factors, including Rab GTPase, P2Y purine nucleotide receptor, integrin alphaVbet a3, T-cell protein tyrosine phosphatase, etc.. Mutations of this gene are implicated in infantile capillary he mangiomas.
