靶点信息

研究背景	This gene encodes a small heme protein that functions as a central component of the electron transport c hain in mitochondria. The encoded protein associates with the inner membrane of the mitochondrion whe re it accepts electrons from cytochrome b and transfers them to the cytochrome oxidase complex. This pr otein is also involved in initiation of apoptosis. Mutations in this gene are associated with autosomal domi nant nonsyndromic thrombocytopenia. Numerous processed pseudogenes of this gene are found through out the human genome.
