靶点信息

研究背景	This gene encodes a member of the Tubby family of bipartite transcription factors. The encoded protein may play a role in obesity and sensorineural degradation. The crystal structure has been determined for a similar protein in mouse, and it functions as a membrane-bound transcription regulator that translocate s to the nucleus in response to phosphoinositide hydrolysis. Two transcript variants encoding distinct isof orms have been identified for this gene. [provided by RefSeq, Jul 2008]
