靶点信息

研究背景	This gene encodes a member of the O class of winged helix/forkhead transcription factor family. Proteins encoded by this class are regulated by factors involved in growth and differentiation indicating they play a role in these processes. A translocation involving this gene on chromosome X and the homolog of the Dr osophila trithorax gene, encoding a DNA binding protein, located on chromosome 11 is associated with le ukemia. Multiple transcript variants encoding different isoforms have been found for this gene.
