靶点信息

研究背景	Serine/threonine-protein kinase involved in autophagy in response to starvation. Acts upstream of phosph atidylinositol 3-kinase PIK3C3 to regulate the formation of autophagophores, the precursors of autophago somes. Part of regulatory feedback loops in autophagy: acts both as a downstream effector and negative regulator of mammalian target of rapamycin complex 1 (mTORC1 via interaction with RPTOR. Activated v ia phosphorylation by AMPK and also acts as a regulator of AMPK by mediating phosphorylation of AMPK s ubunits PRKAA1, PRKAB2 and PRKAG1, leading to negatively regulate AMPK activity. May phosphorylate A TG13/KIAA0652 and RPTOR; however such data need additional evidences. Plays a role early in neuronal differentiation and is required for granule cell axon formation. May also phosphorylate SESN2 and SQSTM 1 to regulate autophagy. Phosphorylates FLCN, promoting autophagy. Phosphorylates AMBRA1 in respons e to autophagy induction, releasing AMBRA1 from the cytoskeletal docking site to induce autophagosome nucleation.
