靶点信息

研究背景	This gene encodes a member of the heat shock protein 70 gene family. The encoded protein is primarily l ocalized to the mitochondria but is also found in the endoplasmic reticulum, plasma membrane and cytop lasmic vesicles. This protein is a heat-shock cognate protein. This protein plays a role in cell proliferation, stress response and maintenance of the mitochondria. A pseudogene of this gene is found on chromosom e 2.[provided by RefSeq, May 2010]
