靶点信息

研究背景	This gene encodes a member of the claudin family. Claudins are integral membrane proteins and compon ents of tight junction strands. Tight junction strands serve as a physical barrier to prevent solutes and wa ter from passing freely through the paracellular space between epithelial or endothelial cell sheets, and a lso play critical roles in maintaining cell polarity and signal transductions. The protein encoded by this ge ne is a major component of central nervous system (CNS) myelin and plays an important role in regulatin g proliferation and migration of oligodendrocytes. Mouse studies showed that the gene deficiency results in deafness and loss of the Sertoli cell epithelial phenotype in the testis. This protein is a tight junction pr otein at the human blood-testis barrier (BTB), and the BTB disruption is related to a dysfunction of this ge ne. Alternatively spliced transcript variants encoding different isoforms have been identified.
