靶点信息

研究背景	This gene encodes a member of the SOX (SRY-related HMG-box) family of transcription factors involved in the regulation of embryonic development and in the determination of the cell fate. The encoded protein may act as a transcriptional regulator after forming a protein complex with other proteins. This protein pl ays a role in hair, blood vessel, and lymphatic vessel development. Mutations in this gene have been ass ociated with recessive and dominant forms of hypotrichosis-lymphedema-telangiectasia.
