靶点信息

研究背景	The protein encoded by this gene is highly similar to Cdc 37, a cell division cycle control protein of Sacchr omyces cerevisiae. This protein is a molecular chaperone with specific function in cell signal transduction. It has been shown to form complex with Hsp90 and a variety of protein kinases including CDK4, CDK6, SR C, RAF-1, MOK, as well as eIF2 alpha kinases. It is thought to play a critical role in directing Hsp90 to its t arget kinases.
