

CD35 Rabbit mAb

货号: B31114

产品信息

| 反应 | Human |
|-------|--|
| 宿主 | Rabbit |
| 克隆性 | Monoclonal |
| 预测反应 | |
| 应用 | WB IHC IF/ICC |
| 推荐浓度 | WB: 1:500 - 1:2000 IHC: 1:50 - 1:200 IF/ICC: 1:50 - 1:200 |
| 理论分子量 | 223kDa |
| 实测分子量 | 280kDa |
| 形式 | Liquid |
| 保存条件 | Store at -20°C. Avoid freeze / thaw cycles. Buffer: PBS with 0.75% BSA,50% glycerol,pH7.3. |
| 偶联物 | Unconjugated |
| 阳性对照 | U-937 |
| 细胞定位 | Membrane,Single-pass type I membrane protein |
| 纯化 | Affinity purification |

抗原信息

| 抗原信息 | Recombinant fusion protein corresponding to Human CD35. |

靶点信息

| 研究背景 | This gene is a member of the receptors of complement activation (RCA) family and is located in the 'clust er RCA' region of chromosome 1. The gene encodes a monomeric single-pass type I membrane glycoprot ein found on erythrocytes, leukocytes, glomerular podocytes, and splenic follicular dendritic cells. The Kn ops blood group system is a system of antigens located on this protein. The protein mediates cellular bin ding to particles and immune complexes that have activated complement. Decreases in expression of thi s protein and/or mutations in its gene have been associated with gallbladder carcinomas, mesangiocapill ary glomerulonephritis, systemic lupus erythematosus and sarcoidosis. Mutations in this gene have also b een associated with a reduction in Plasmodium falciparum rosetting, conferring protection against severe malaria. Alternate allele-specific splice variants, encoding different isoforms, have been characterized. Ad ditional allele specific isoforms, including a secreted form, have been described but have not been fully c haracterized. |
|--------------|---|
| 基因 ID | 1378 |
| 基因名 | CR1 |
| Swiss | P17927 |
| 别名 | CR1;C3BR;C4BR;CD35;KN |

产品验证

Western blot analysis of CD35 expressed in U-937 using CD35 Rabbit mAb at 1:1000. Secondary antibody : HRP Goat Anti-Rabbit IgG (H+L) at 1:5000. Lysates/proteins: 30ug per lane. Blocking buffer: 5% non-fat dry milk in TBST. Detection: ECL Enhanced Kit. Exposure time: 120s.
