## 靶点信息

| 研究背景 | Prostaglandin-endoperoxide synthase (PTGS), also known as cyclooxygenase, is the key enzyme in prosta glandin biosynthesis, and acts both as a dioxygenase and as a peroxidase. There are two isozymes of PT GS: a constitutive PTGS1 and an inducible PTGS2, which differ in their regulation of expression and tissue distribution. This gene encodes the inducible isozyme. It is regulated by specific stimulatory events, sugg esting that it is responsible for the prostanoid biosynthesis involved in inflammation and mitogenesis. |
