靶点信息

研究背景	This gene encodes a member of the wingless-type MMTV integration site (WNT) family of highly conserve d, secreted signaling factors. WNT family members function in a variety of developmental processes inclu ding regulation of cell growth and differentiation and are characterized by a WNT-core domain. This gene may play a role in human development as well as carcinogenesis. Alternative splicing results in multiple t ranscript variants. [provided by RefSeq, May 2014]
